

## **Window Film- Food Producer**

### **Business Focus**

Paramount 21 Ltd are a frozen food manufacturing business based in South Devon. They produce a range of speciality Seafood and vegetarian added value products for the foodservice and retail markets.

### **Sustainability Action taken:**

Adhesive Backed Polymeric Window Film (Window Film) is a high clarity polyester film that has been designed for application to glass to improve its performance. It is glass treatment that can be professionally applied either in the factory to new glass or insitu to existing windows, glass doors and partitions.

The correct application of film onto glass can upgrade the original glazing to meet the requirements of Building Regulations, Health & Safety Regulations as well as British and European Standards.

There are various types of window film including Safety Film, Security Film, Solar Control Film, Low Emissivity Film and other specialist films. Paramount 21 retrospectively fitted Solar Control Film to its office windows at a cost of between £1000 & £2000. Paramount reports that this film has certainly helped control the office temperature in the summer months to the extent that they have managed to avoid fitting air conditioning in any of their offices. The workforce has commented on the marked improvement, which has also helped reduce computer glare. The other added benefit to this product is the fact that it has a life of between 10 and 15 years with no maintenance required over this time.

### **How can members action this?**

The [Glass and Glazing Federation](#) has a list of their members who can provide this service.
